Intrascope Consulting Announces Partnership to Help its Clients Take Advantage of Canadian Government Grants and Tax Credits for Innovation and R&D

The company enters into a formal partnership with TSI to provide guidance on financing technology advancement projects

TORONTO, CANADA (February 4, 2010) – Intrascope Consulting has entered into a partnership agreement with TSI, a consultancy organization specialized in helping companies identify and benefit from Canadian government programs to foster innovation, research and development (R&D). The partnership will allow Intrascope Consulting to offer its clients guidance on finding vitally important government financing for their R&D projects.

As part of a continuing effort to improve the global competitiveness of Canadian businesses, a variety of grants and tax credits are available to companies looking to commercialize unique advancements in technology. In the past decade, the pace of change in global markets has increased, making government programs of this nature crucial to the success of many technologies by bringing these ideas to market faster and capturing an early lead in market share.

Intrascope Consulting's clients, who are primarily in high technology sectors like medical devices and aerospace, can benefit enormously from the knowledge that TSI brings to the constantly changing world of R&D grants and tax incentives.

Dr. Ferhan Bulca, Principal at Intrascope Consulting, stated that many opportunities are lost due to lack of knowledge in government funding or their eligibility criteria. "Typically, R&D companies process tax credit applications after the R&D work is done and may lose out on support due to details they did not know. An upfront consultation on the eligibility criteria maximizes the financial benefits to the company conducting the R&D and helps them save time and money by simplifying the application process," he says.

With this partnership agreement, Intrascope Consulting will deliver even higher value to its clients by reducing R&D expenses through relevant government support. The partnership agreement was signed on February 3, 2010 and is effective immediately.

###

About Intrascope Consulting and Dr. Ferhan Bulca

Intrascope Consulting helps clients bring down the time and monetary costs associated with product development. With experience in manufacturing, robotics, aerospace, laser communications, medical devices and analytical instruments, we help clients navigate the product development process for complex systems and cutting edge technologies.

Dr Ferhan Bulca, Intrascope Consulting's Principal, has over 15 years of success in research and product development in high technology and manufacturing environments. He has extensive experience in all stages of product research and development, from early-stage research prototyping to field testing product prototypes and transition to manufacturing.
